THE RESULTS ARE IN:

IT EXECS OVERCONFIDENT IN NETWORK SECURITY AND BURDENED BY INEFFICIENCY
IT Execs from Financial institutions were surveyed on top network security challenges.
50%
Nearly 50% of IT executives think their firewalls are 99% effective.[1]

But in recent testing, 80% of vendors missed evasions.[2]
80%

Here are other top challenges we discovered: [3]

62%
Complexity of managing distributed firewalls

45%
Integrating necessary security features

36%
Struggle with total cost of ownership

Overall, financial institutions were found to have fragmented network capabilities that are labor intensive and inconsistent to operate, secure and manage. These vulnerabilities leave financial networks exposed.

FINANCIAL INSTITUTIONS NETWORKS
MUST EVOLVE

Financial Institutions need networking that can be efficiently configured, managed and secured at scale.

Modern Security
Crucial features such as anti-evasion, encrypted inspection, anti-malware, proxies, and more must be built into NGFW solutions for easy integration.

Centralized Manageability
Reduce complexity of managing multiple security environments across branches and corporate offices with minimal overhead.

Dynamic Scalability
Get the most out of your investment with smooth scalability that will keep your technology relevant as your needs evolve.

Forcepoint provides: fast, always-on connectivity that is extremely efficient to centrally manage everywhere—on premises, in virtual data centers, and in the cloud—with industry-leading security.
